

Yash Kamble

Game Developer — Gameplay & Systems

yashkamble435hd@gmail.com | Portfolio | LinkedIn | itch.io

Professional Summary

Game developer with hands-on experience building complete solo projects using Unreal Engine and Unity. Focused on gameplay systems, rule-based mechanics, and experimental interaction. Developed projects spanning psychological horror, hardware-integrated racing, AI-driven NPC interaction, and game jam prototypes. Seeking internship or junior-level gameplay development roles.

Technologies

Game Engine: Unreal Engine, Unity (2D)

Languages: C++ (unreal), C# (Unity), Python,

Tools: Git, Visual Studio, Audacity, GIMP, Arduino IDE

Platforms: PC, Web

Education

Terna Engineering College, Navi Mumbai,
Bachelor of Engineering in Information Technology

Pursuing

- CGPA: 8.3 / 10

Projects

Hello Owner — Psychological Horror (Unreal Engine)

itch.io

- Designed a narrative-driven psychological horror experience using environmental storytelling and audio-based tension.
- Implemented a rule-based maze system with dynamic lighting constraints and movement punishment.
- Created multiple endings driven by player exploration and decision-making.
- Solo project, developed in approximately 7 month.

Ultra Drive — Hardware-Controlled Racing (Unreal Engine)

itch.io

- Designed a shared AI framework where multiple NPCs generate distinct responses using attribute-based logic.
- Implemented free-form text interaction without scripted dialogue trees.
- Focused on scalability, immersion consistency, and system-level AI architecture.
- System prototype built as a technical showcase.
- Solo project, developed in approximately 1 month.

Forest of Undead — 2D Survival Shooter (Unity)

itch.io

- Developed a complete wave-based survival loop with scalable enemy spawning.
- Implemented a randomized upgrade system enabling diverse player build paths.
- Designed UI and audio feedback to support readable chaos and progression.
- Solo project, developed in approximately 1 month.

Dynamic NPC AI System — AI Interaction Prototype

itch.io

- Designed a shared AI framework where multiple NPCs generate distinct responses using attribute-based logic.
- Implemented free-form text interaction without scripted dialogue trees.
- Focused on scalability, immersion consistency, and system-level AI architecture.
- System prototype built as a technical showcase.
- Solo project, developed in approximately 2 weeks.

Game Jam Participation

Loop.exe — GMTK Game Jam 2025

[itch.io](#)

- Designed and developed a memory-based puzzle game under strict time constraints.
- Focused on cognitive pressure and permanent consequences as core mechanics.
- Completed and submitted a playable build within a strict four-day game jam deadline.
